

This appliance can be used by children aged 8 years and above and persons with reduced physical, sensory or mental capabilities or lack of experience and knowledge if they have been given supervision or instruction concerning use of the appliance in a safe way and understand the hazards involved. Children should not play with the appliance. Cleaning and user maintenance should not be made by children without supervision.

Warning

- Remove exhausted batteries.
- Do not dispose of batteries in a fire - batteries may explode or leak.
- Do not mix new and used batteries.
- Do not mix alkaline (standard) and rechargeable batteries.
- Only the recommended batteries should be used.

Please re-cycle packaging where facilities exist

Waste electrical products should not be disposed of with household waste. Please recycle where facilities exist. Check with your Local Authority or retailer for recycling advice.

Anti MOUSE™ Battery Powered MOUSE REPELLENT

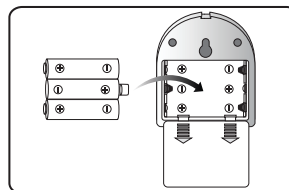

Product Code STV820

STV

LIVE PEST-FREE

Installation

Remove all packaging and insert 3 x AA 1.5V alkaline batteries (not included), ensuring batteries are inserted in the correct polarity. Once the batteries are installed the unit will run a self-test and a succession of three short audible beep tones indicate that it has activated and is working correctly. Each time the unit completes its duty cycle and emits ultrasound the red LED on the front panel will light up. The LED is a visual indication that the unit is working correctly and it will allow you to locate the unit and confirm that it is operating in dark, or out-of-reach areas. NOTE: The Anti Mouse Battery Powered Mouse Repellent will produce a recurring beep when the battery power becomes too low to operate effectively, even though the LED indicator may continue flashing intermittently.

Requires 3 x AA batteries (not included)

To maximise the performance

Leave the unit operating continuously for 24hr protection. 3 x AA alkaline batteries will provide sufficient power for the unit to operate for at least 3 months. Make sure food is stored out of reach of rodent pests. Find and repair any openings where rodent pests can get in. Avoid installing the unit in areas where furniture and other household items may obstruct the ultrasonic signal.

Important

Do not tamper with the unit. For indoor use only. Do not cover the unit or place it near direct sources of heat such as radiators, cookers and other appliances including refrigerators.

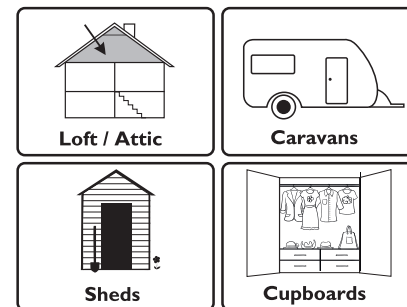

Do not use the unit if there are signs of damage.

Do not use the ultrasonic repellent unit around rodent pets such as hamsters, gerbils, guinea pigs, rabbits etc.

How Does The Ultrasonic Mouse Repellent Work?

The unit emits powerful sound waves at a frequency that rodent pests can hear but which are not audible to humans. Rodents are disturbed by the ultrasound and will move out of the treatment areas.

What Areas Will The Unit Protect?

A single unit will protect one treatment area. For large or irregular shaped treatment areas, more than one unit may be required. Living areas and buildings with hard surfaces are ideal environments in which to use the Anti Mouse Battery Powered Mouse Repellent. Avoid installing the unit in areas where furniture and other household items may obstruct the ultrasonic signal.
